

# Quarterly Report on Rhode Island Traffic Stop Data for January, February and March 2005

## Executive Summary

June 25, 2005

### Prepared by:

Dr. Amy Farrell, Northeastern University, Institute on Race and Justice  
Associate Dean, Jack McDevitt, Northeastern University, College of Criminal Justice  
Chris Eggimann, Institute on Race and Justice  
Jake Hulseberg, Institute on Race and Justice  
Jason Rydberg, Institute on Race and Justice

The data presented herein represent monthly statistics of traffic stops and searches by driver's race for each Rhode Island jurisdiction between January 1, 2005 and March 31, 2005. It is important to remember that this data is preliminary and has not yet been compared to an appropriate benchmark, against which we could begin to understand if racial disparity exists in traffic stops. Future analysis will begin to assess the validity of different comparison populations to best approximate the demographic composition of roadways in particular jurisdictions.

Between January 1, 2005 and March 31, 2005, 67,514 traffic stop data cards from 38 municipal jurisdictions and the Rhode Island State Police were recorded. Of the cards submitted 67,198 were used for the calculations seen in Table 1 (complete race and month information) and 62,981 were used for the calculations seen in Table 3 (complete race, month and search information) and 62,558 were used for the calculations in Table 4 (complete race, month and frisk information). This represents roughly a 7% error rate for traffic stop forms missing necessary data. This reduced error rate represents a significant improvement from the first quarter report in the completeness and accuracy of the data submitted by law enforcement agencies across the state.

Although the data contained in this report continue to be preliminary, there are a number of findings in the statewide analysis that are worth note.

- White drivers make up approximately 80% of those stopped, Black drivers make up nearly 8.3% of those stopped, Hispanic drivers make up 9.4% of those stopped and Native American, Asian and other drivers comprise the remaining 2.3% of those stopped.
- For both white and non-white drivers, motor vehicle violations are the primary basis for stops (88% white and 85% non-white). Investigatory reasons make up 4.6% of white stops and 7.6% of non-white stops. Motorist assists compromise 5.4% of both white and non-white stops (Table 2).

- Approximately 4% of vehicle stops resulted in a search of the driver, passengers, or the vehicle in the last three months of 2004.
- Once stopped, Black and Hispanic drivers were disproportionately more likely to experience searches than White, Asian, or Native American drivers. Statewide, during this quarter 8.1% of Black and 7.0% of Hispanic drivers were searched compared to only 3.2% of White drivers (Table 3). It is important to note that all searches incident to a lawful arrest were not considered to be discretionary and therefore were **not included** in this analysis. Discretionary searches include searches based on probable cause, reasonable suspicion, inventory/tow, terry-frisks, plain view or odor of drugs/alcohol. For a breakdown of reasons for discretionary searches by race see Table 1 in the appended material.
- Once stopped, Black and Hispanic drivers were also disproportionately more likely to experience frisks than White, Asian, or Native American drivers. Statewide, during this quarter 8.1% of Black and 6.6% of Hispanic drivers were searched compared to only 2.8% of White drivers (Table 4). It is important to note that all searches incident to a lawful arrest were not considered to be discretionary and therefore were **not included** in this analysis.
- The possession of contraband does not appear to fully explain the racial disparities in searches between Black, Hispanic and White drivers. When searched, 23.8% of White drivers are found with contraband compared to 18.6% of Black drivers, and 18.5% of Hispanic drivers (Table 5). As with the previous two tables, searches incident to a lawful arrest were not considered to be discretionary and therefore were **not included** in this analysis.
